

Model RedRover Remote Communication Software

Office software designed to allow plant data from one or more SYSTEMS' Loadout Systems to be exchanged with an office location.

Software Description.....

- Establishes a modem connection over conventional telephone lines between the plant loadout and office computers.
- Multiple plant locations may be interrogated from a single office location. The location name, access phone number, and associated databases for each location will be stored in separate file directories. The user needs only to select the desired location by name to initiate access.
- Databases can be viewed and edited locally. Additions, deletions, and changes may be made to these databases on the office computer. Office personnel may then send updates back to the plant computer. Changes cannot be made to the ticket file.
- Office location may retrieve ticket, archived ticket, truck, job, customer, material, and comment databases from the plant computer.
- Any set of tickets may be retrieved based on a date range, a specific job or all jobs, a specific customer or all customers, a specific truck or all trucks, and a specific material or all materials. Tickets may not be edited nor may they be sent back to the plant computer. The range of tickets chosen by the office may span archive ticket files as well as the current Loadout ticket file. Copy tickets may be printed at the office but will be printed in a generic ticket form and clearly marked as copies.
- All data is stored in standard dBASE5 format and can be exported to other software.
- RedRover software provided on CD compatible with Windows® 98 or newer operating systems.
- RedRover license for one (1) office computer and one (1) or more connected plant loadout computers.
- Two (2) external modems are provided with each RedRover license, one for the plant loadout computer and one for the office computer. Modems are provided to insure compatibility. Additional modems for other additional plant locations are available from SYSTEMS Equipment.

Products are sold subject to SYSTEMS Equipment's current Warranty, Terms, & Conditions.
